

ISCO International, LLC Names Tim Hall as Vice President – North America Sales

Technology Veteran with 20+ Years Wireless Industry Experience Will Help Company Expand Presence with 3G and 4G Operators

Elk Grove Village, IL – February 22, 2011 – ISCO International, a leading provider of flexible spectrum conditioning solutions for wireless service providers, announces the recent promotion of Tim Hall to Vice President of North American Sales. In this role, Mr. Hall will oversee the sales efforts with existing and new 3G and 4G service providers in the U.S., Canada, and Mexico. He will also work closely with ISCO's management, engineering, and product development teams to advance the company's product offering to its partners.

At ISCO, Mr. Hall has served as the AT&T National Account Sales Director as well as managing the South Region sales activities. During this time, he has successfully led the efforts to secure and grow AT&T as a partner with ISCO. He has also partnered with ISCO's existing management team to develop and drive the focus of ISCO during his tenure.

Prior to joining ISCO, Mr. Hall served as Vice President of Sales with Dilithium Networks, a global leader in converged solutions for mobile and broadband networks and the Internet. During his tenure, he led the North America and Japan sales & channel efforts and secured key partnership agreements with Lucent Technologies, Nortel Networks, Avaya, Movius, Qualcomm, and Toshiba in Japan. Prior to Dilithium Networks, Mr. Hall held numerous leadership positions with Glenayre Electronics, a leading provider of wireless and messaging solutions.

"ISCO has made great strides in helping our partners to ensure the best customer experience possible when utilizing the wireless operators' voice and data networks. With the anticipated data traffic requirements growing exponentially over the next several years, ISCO is well positioned and it is my objective to build upon the positive momentum that ISCO has created over the years," said Mr. Hall. "The company sees a number of phenomenal opportunities across the existing 3G and 4G networks and I look forward to contributing to the company and expand its growing customer base."

About ISCO International

ISCO International operates on the "front lines" of 3G – and soon – 4G communications by enhancing the integrity of a mobile operator's "physical layer" assets – the cell site and acquired spectrum. ISCO understands that wireless communications depend heavily on the user's RF connection to the base station and the company's "spectrum conditioning" product line ensures that this connection performs as expected even in the most hostile and unpredictable environments. ISCO's new Proteus™ product, based on the latest PurePass™ digital signal processing technology, adaptively identifies and corrects the physical layer impairments (PLI) that decrease a cell site's coverage, capacity, data throughput and KPI performance. In sum, ISCO allows wireless carriers to get the most out of their existing base stations and spectrum (possibly eliminating the need to build additional ones in certain situations), reduce operating expense and deliver a consistently high quality of service.
